The Replication Server Options can be used with Replication Server for bidirectional replication across distributed, heterogeneous systems to allow you to perform different operational and decision-support tasks.

The Replication Server Options are compatible with the same platform and operating system configurations as Enterprise Connect Data Access™ (ECDA) 15.0 and Sybase Replication Agent™ 15.0. For specific hardware and software requirements, refer to the documentation for ECDA 15.0 and Sybase Replication Agent 15.0.

For more information, refer to the Replication Server *Heterogeneous Replication Guide*.

4.1 Known Sybase installer issues

This section describes known issues with the Sybase installer that are not specific to a particular data server type.

4.1.1 Cannot view text fields properly when using a Hummingbird Exceed client

If you use Hummingbird Exceed from a Windows workstation to install Sybase Replication Agent on a UNIX host, you might not be able to view all of the text fields on the Sybase installer windows.

Workaround: Use a native X-Windows session to run the Sybase installer, or run the Sybase installer in console or silent mode. For details, see the Sybase Replication Agent *Installation Guide*.

5. Technical support

Each Sybase installation that has purchased a support contract has one or more designated people who are authorized to contact Sybase Technical Support. If you have any questions about this installation or if you need assistance during the installation process, ask the designated person to contact Sybase Technical Support or the Sybase subsidiary in your area.
