Width.AutoSize Property

In the Grid presentation style report, the Width.AutoSize property determines whether a column adjusts its width according to the data it contains.

Applies to

Column controls in the Grid presentation style

Usage

The AutoWidth property takes one of these numeric values:

- 0 - No AutoWidth: This is the default value.
- 1 - AutoWidth is computed for visible rows (monotonic) and does not decrease when the widest column is reduced when scrolling.
- 2 - AutoWidth is computed for visible rows (non-monotonic)
- 3 - AutoWidth is computed for all retrieved rows.

You can set the AutoWidth property:

- In the painter - in the Properties view, select one of the values in the drop-down list for the AutoWidth property.
- In scripts - set the AutoWidth property to one of the numeric values.

See the *InfoMaker Users Guide* for details.
