Installation Guide

RepConnector™
15.0.1

[ WINDOWS, LINUX, UNIX ]
This publication pertains to Sybase software and to any subsequent release until otherwise indicated in new editions or technical notes. Information in this document is subject to change without notice. The software described herein is furnished under a license agreement, and it may be used or copied only in accordance with the terms of that agreement.

To order additional documents, U.S. and Canadian customers should call Customer Fulfillment at (800) 685-8225, fax (617) 229-9845.

Customers in other countries with a U.S. license agreement may contact Customer Fulfillment via the above fax number. All other international customers should contact their Sybase subsidiary or local distributor. Upgrades are provided only at regularly scheduled software release dates. No part of this publication may be reproduced, transmitted, or translated in any form or by any means, electronic, mechanical, manual, optical, or otherwise, without the prior written permission of Sybase, Inc.

About This Book

Audience
This book is for system administrators.

How to use this book
This book contains these chapters:

- Chapter 1, “Overview,” describes RepConnector™ and how it integrates with your systems.
- Chapter 3, “Post-Installation Tasks,” describes post-installation tasks and how to verify the installation.
- Chapter 4, “Uninstalling RepConnector,” explains how to uninstall RepConnector.

Related documents
Documentation sets for Unwired Orchestrator™, Sybase™ Adaptive Server™ Enterprise, Replication Server®, and EAServer are included with this product.

Documentation sets for Oracle, BEA WebLogic, TIBCO, IBM WebSphere MQ, and Sonic MQ are not included with this product. See the Eclipse documentation at http://eclipse.org.

Other sources of information
Use the Sybase Getting Started CD, the SyBooks™ CD, and the Sybase Product Manuals Web site to learn more about your product:

- The Getting Started CD contains release bulletins and installation guides in PDF format, and may also contain other documents or updated information not included on the SyBooks CD. It is included with your software. To read or print documents on the Getting Started CD, you need Adobe Acrobat Reader, which you can download at no charge from the Adobe Web site using a link provided on the CD.

- The SyBooks CD contains product manuals and is included with your software. The Eclipse-based SyBooks browser allows you to access the manuals in an easy-to-use, HTML-based format.

Some documentation may be provided in PDF format, which you can access through the PDF directory on the SyBooks CD. To read or print the PDF files, you need Adobe Acrobat Reader.
Refer to the *SyBooks Installation Guide* on the Getting Started CD, or the *README.txt* file on the SyBooks CD for instructions on installing and starting SyBooks.

- The Sybase Product Manuals Web site is an online version of the SyBooks CD that you can access using a standard Web browser. In addition to product manuals, you will find links to EBFs/Maintenance, Technical Documents, Case Management, Solved Cases, newsgroups, and the Sybase Developer Network.

  To access the Sybase Product Manuals Web site, go to Product Manuals at http://www.sybase.com/support/manuals/.

**Sybase certifications on the Web**

Technical documentation at the Sybase Web site is updated frequently.

**Finding the latest information on product certifications**

2. Select Products from the navigation bar on the left.
3. Select a product name from the product list and click Go.
4. Select the Certification Report filter, specify a time frame, and click Go.
5. Click a Certification Report title to display the report.

**Creating a personalized view of the Sybase Web site (including support pages)**

Set up a MySybase profile. MySybase is a free service that allows you to create a personalized view of Sybase Web pages.

2. Click MySybase and create a MySybase profile.

**Sybase EBFs and software maintenance**

**Finding the latest information on EBFs and software maintenance**

2. Select EBFs/Maintenance. Enter user name and password information, if prompted (for existing Web accounts) or create a new account (a free service).
### Conventions

This manual uses these style conventions:

- **Commands** you must enter exactly as shown appear in a Courier font:
  
  **On Windows:**
  ```
  dir \work\sybase
  ```
  
  **On UNIX:**
  ```
  setenv SYBASE /work/sybase
  ```

- **Words** you replace with the appropriate value for your installation appear in italics:
  ```
  isql -Uyour_username -Pyour_password
  ```

- **The names of files, volumes, and directories** appear in italics:
  ```
  On UNIX: /work/sybase
  On Windows: \work\sybase
  ```

- **The names of programs, utilities, stored procedures, databases, and commands** appear in a sans serif font:
  ```
  ratool
  ```

- **Items** within a graphical pull-down menu appear with vertical bars showing the menu hierarchy:
  ```
  File | Print
  ```

### Syntax conventions

Syntax formatting conventions are summarized as follows. Examples that combine these elements follow the table.

<table>
<thead>
<tr>
<th>Key</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>variable</code></td>
<td>Variables (words that stand for values that you fill in) appear in italics.</td>
</tr>
<tr>
<td><code>{}</code></td>
<td>Curly braces mean you must choose at least one of the enclosed options. Do not include braces in the command.</td>
</tr>
<tr>
<td><code>[]</code></td>
<td>Brackets mean you may choose or omit enclosed options. Do not include brackets in the command.</td>
</tr>
<tr>
<td>`</td>
<td>`</td>
</tr>
</tbody>
</table>
Required choices

- Curly braces and vertical bars – choose one and only one option.
  \{red | yellow | blue\}
- Curly braces and commas – choose one or more options. If you choose more than one, separate your choices with commas.
  \{cash, check, credit\}

Optional choices

- One item in square brackets – choose or omit it.
  \[anchovies\]
- Square brackets and vertical bars – choose none or only one.
  \[beans | rice | sweet_potatoes\]
- Square brackets and commas – choose none, one, or more options. If you choose more than one, separate your choices with commas.
  \[extra_cheese, avocados, sour_cream\]

Repeated elements

An ellipsis (...) means you may repeat the last unit as many times as necessary. For example, when you use the alter function replication definition command, you can list one or more parameters and their datatypes for the add clause or the add searchable parameters clause:

```plaintext
alter function replication definition function_rep_def
  (deliver as 'proc_name' |
  add @parameter datatype [, @parameter datatype]... | 
  add searchable parameters @parameter [, @parameter]... |
  send standby {all | replication definition} 
  parameters)
```

Accessibility features

This document is available in an HTML version that is specialized for accessibility. You can navigate the HTML with an adaptive technology such as a screen reader, or view it with a screen enlarger.
RepConnector 15.0.1 and the HTML documentation have been tested for compliance with U.S. government Section 508 Accessibility requirements. Documents that comply with Section 508 generally also meet non-U.S. accessibility guidelines, such as the World Wide Web Consortium (W3C) guidelines for Web sites.

For information on using this product without a mouse, see the RepConnector Configuration and User's Guide.

**Note** You might need to configure your accessibility tool for optimal use. Some screen readers pronounce text based on its case; for example, they pronounce ALL UPPERCASE TEXT as initials, and MixedCase Text as words. You might find it helpful to configure your tool to announce syntax conventions. Consult the documentation for your tool.

For information about how Sybase supports accessibility and a Section 508 compliance statement, see Sybase Accessibility at http://www.sybase.com/accessibility. The Sybase Accessibility site includes links to information on Section 508 and W3C standards.

For more information about accessibility features of RepConnector 15.0.1, see the RepConnector Configuration and User’s Guide.

Each Sybase installation that has purchased a support contract has one or more designated people who are authorized to contact Sybase Technical Support. If you cannot resolve a problem using the manuals or online help, please have the designated person contact Sybase Technical Support or the Sybase subsidiary in your area.
CHAPTER 1

Overview

This chapter introduces the installation process for Sybase RepConnector.

<table>
<thead>
<tr>
<th>Topic</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Introduction</td>
<td>1</td>
</tr>
<tr>
<td>Installation workflow</td>
<td>1</td>
</tr>
</tbody>
</table>

Introduction

RepConnector combines traditional data integration with message-level integration. You must install RepConnector in the same directory structure as the application server you will be using it with.

RepConnector consists of:

- RepConnector runtime component – monitors databases for business events of interest, transforms them into XML, and routes them to messaging systems, Java components, integration servers, business process engines, or other applications. The runtime component also routes events from messaging systems to databases.
- RepConnector Manager – a graphical user interface (GUI) application that allows you to create, configure, and manage RepConnector connections.

Installation workflow

Deploy RepConnector on a J2EE application server. RepConnector supports Sybase’s EAServer and BEA’s WebLogic. Install and configure the application server. If you are using WebLogic, it must be running before you install RepConnector.

Follow this workflow:
Installation workflow

1. Review system requirements
2. Install the application server and, if you are using BEA WebLogic, start it.
3. Start InstallShield
4. Install and deploy RepConnector.
5. Verify the installation.

The following chapters describe the tasks in this workflow.
CHAPTER 2

Installing RepConnector

This chapter describes Sybase RepConnector.

<table>
<thead>
<tr>
<th>Topics</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>System requirements</td>
<td>3</td>
</tr>
<tr>
<td>Pre-installation tasks</td>
<td>5</td>
</tr>
<tr>
<td>Installing and deploying RepConnector</td>
<td>6</td>
</tr>
</tbody>
</table>

System requirements

This section describes the software, operating system, memory, and disk space RepConnector needs to run successfully.

Required servers

One of the following servers must be installed and running before installing RepConnector:

- Sybase EAServer version 5.2 running with JDK 1.4, with EBFs Solaris 13238, Linux 13507, and AIX 13508
- BEA WebLogic version 8.1 running with JDK 1.4

System configuration

RepConnector requires the system configuration described in Table 2-1.

<table>
<thead>
<tr>
<th>Item</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Disk space</td>
<td>A minimum of 160MB of available hard disk space.</td>
</tr>
<tr>
<td></td>
<td>A minimum of 50MB in the system temporary directory (TEMP on Windows or /tmp on UNIX).</td>
</tr>
</tbody>
</table>
System requirements

<table>
<thead>
<tr>
<th>Item</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Memory</td>
<td>The minimum memory required is 512MB.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> Recommended memory for satisfactory performance depends on message rates, message sizes, and application-specific factors.</td>
</tr>
<tr>
<td>Operating system</td>
<td>One of the following platforms:</td>
</tr>
<tr>
<td></td>
<td>• Windows 2000 Service Pack 3 or later</td>
</tr>
<tr>
<td></td>
<td>• Windows 2003</td>
</tr>
<tr>
<td></td>
<td>• Solaris version 8.0 or 9.0</td>
</tr>
<tr>
<td></td>
<td>• AIX 5.2 or 5.3</td>
</tr>
<tr>
<td></td>
<td>• Linux 2.1 or 3.0</td>
</tr>
<tr>
<td></td>
<td>• HP 11.23</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> Information about disk space and memory requirements for components in the system is available in the documentation for each specific product.</td>
</tr>
</tbody>
</table>

Other optional software

- IBM JMS classes are installed by default when you install IBM WebSphere MQ Series 6.0, but not if you install IBM MQ Series 5.x. See IBM Web site at http://www.ibm.com.

- IBM WebSphere MQ/MQJMS 6.0.
- TIBCO Rendezvous version 7.4.1 or later
- TIBCO Enterprise for JMS version 4.3.0
- TIBCO Active Enterprise 4.1
- Sonic MQ version 6.1
- Unwired Orchestrator
  - For information on how RepConnector works with Unwired Orchestrator, see the *RepConnector Configuration and User’s Guide*.
- Eclipse 3.1.2
Pre-installation tasks

Before installing RepConnector:

1. Verify that there is enough disk space for InstallShield to create the RepConnector directory structure. Check the requirements in Table 2-1 on page 3.

2. Install and start the application server.
   - For EAServer, see the EAServer Installation and Configuration Guide.
   - If you are using WebLogic, install and start the WebLogic application server. See the BEA documentation for WebLogic at http://commerce.bea.com/index.jsp.

3. Verify that your application server is running and ready to accept connections.
   - When EAServer is ready, the server console displays:
     
     Accepting Connections
   
   - When WebLogic is ready, the server console displays:
     
     Server started in RUNNING mode

See your application server documentation for more information.

4. If you are installing on a UNIX machine, verify that your PATH environment variable includes “.” at the end of the definition so that applications look for executable files from the current directory.

   If “.” is not included in the PATH environment variable, add it:

   - In the UNIX sh environment:

     PATH=.:$PATH
     export PATH

   - In the UNIX cshk and tcsh environments:

     setenv PATH .:$PATH
Installing and deploying RepConnector

This section describes the steps to install and deploy both the RepConnector runtime component and RepConnector Manager. See “Overview” on page 1 for more information about RepConnector.

v Starting InstallShield on UNIX

1 Insert the RepConnector CD into your CD drive.

2 Mount the CD:
   • On a Solaris platform, the operating system mounts the CD automatically. If you get CD-reading errors, check your operating system kernel to verify that the ISO 9660 option is turned on.
   
   **Note** If your CD displays anything other than repcon15.0sol, you previously installed a Sybase CD on your system. Perform either of these two options to install your current CD:
   • Restart your system.
   • Delete the sybasecd file in /vol/dsk.
   • On an IBM AIX platform, mount the CD using the following command, where repcon15aix is the CD drive device name, and cdrom is the directory where the CD is to be mounted:

     ```
     /usr/sbin/mount -v 'cdrfs' -r" device_name RC125IBM/cdrom
     ```

     The location of the mount command is site-specific and may differ from what is shown in these instructions.

3 Enter the following to start installation, where cdrom is the directory you specified when mounting the CD drive:
   • On Solaris,
     a At the command line, enter cd /cdrom/repcon15.0.1sol.
     b Enter ./setupSOL.bin.
   • On AIX:
     a At the command line, enter cd /cdrom/repcon15.0.1aix.
     b Enter ./setupAIX.bin.
   • On Linux,
     a At the command line, enter:
CHAPTER 2    Installing RepConnector

```
    cd /cdrom/repcon15.0.1linuxx86.
    b Enter ./setupLinux.bin

  • On HP:
    a At the command line, enter cd/cdrom/repcon15.0.1hp64.
    b Enter ./setupHP.bin.
```

v Starting InstallShield on Windows

1 Insert the RepConnector CD into your CD drive.
2 If InstallShield does not start automatically, go to the CD drive that holds the installation CD and double-click setupWIN.exe.

v Installing RepConnector components

To install either the RepConnector runtime component or RepConnector Manager after starting InstallShield:

1 When the InstallShield Welcome window appears, click Next.
2 On the End-user License Agreement window, select your country from the drop-down list and read the end-user license agreement carefully. Select I Agree to continue with the installation.

**Note** If you do not select I Agree, you cannot install the software. You must click Cancel to end the installation process.

Click Next.

3 Select one of:

  • RepConnector for Sybase EAServer, which installs the RepConnector runtime component into the EAServer directory structure. Click Next, then follow the steps in “Installing the RepConnector runtime component.”

  • RepConnector for BEA WebLogic, which installs the RepConnector runtime component into the WebLogic directory structure. Click Next, then follow the steps in “Installing the RepConnector runtime component.”

**Note** You must have BEA WebLogic version 8.1 already installed and running on your machine before you can install this option.
Installing and deploying RepConnector

- RepConnector Manager, which installs the RepConnector Manager component. Click Next, then follow the steps in “Installing RepConnector Manager” on page 10.

**Installing the RepConnector runtime component**

To install the RepConnector runtime component using InstallShield:

1. Enter or browse for the name of the directory where the selected application server is installed.
   
   For example, if you are installing RepConnector with EAServer, the default location is:
   
   - On Windows, `%SYBASE%\EAServer`
   - On UNIX, `$SYBASE/EAServer`

   Click Next.

2. If you are installing on BEA WebLogic Server, enter the WebLogic information:
   
   - Host name – your machine name.
   - Domain name – your domain name.
   - Server name – your server name.
   - Port number – 7001, or your port number.
   - User name – your WebLogic user name.
   - Password – your WebLogic user password.

   Click Next.

3. InstallShield tries to connect to the application server by sending a ping. If the ping is successful, InstallShield takes you to the next step.
   
   If the ping is not successful, InstallShield displays an error message:
   
   Ping to the server failed. Verify that the server is running, and that you have entered valid information

   To troubleshoot the error:
   
   - Verify that the server is running and ready to accept connections. See “Pre-installation tasks” on page 5 for more information.
   - If the server is running, verify that the information you entered in the previous step (Step 2, page 8) is correct. See your system administrator if you are not able to verify this information.

   If the server is not running, restart it.
4 If the server is running, the information in the InstallShield wizard is correct, and there is no other apparent reason for the failure, ask your Sybase representative to call Sybase Technical Support.

5 In the preview window, verify the size of the installation. If the installation is larger than the space you have available, see your system administrator to reassess the requirements.

6 InstallShield installs the RepConnector runtime component, then deploys it to the application server.

   If you have an existing RepConnector installation, InstallShield asks if you want to overwrite that installation. Click Yes to overwrite or Cancel.

5 The Sybase Software Asset Management (SySAM) License Server window allows you to designate where RepConnector will find its licenses. Specify whether the licenses are obtained from a license server (a served license) or not (an unserved license).

   Note For information about served and unserved licenses, and about choosing the best license server for your environment, see Chapter 2, “Choosing a License Model” of the Sybase Software Asset Management User’s Guide.

   If you answer yes, you must know the host name of the machine where the license manager is running, and the port number if you have used a nondefault port number.

   If you answer no, you will be using unserved licenses. You are reminded to download and install the license file after you finish this window.

7 The SySAM Notification window asks you to configure your server for e-mail notification. When configuration is enabled, designated users receive information about license management events requiring attention.

   Provide the following information:

   • SMTP server host number
   • SMTP server port number
   • E-mail return address
   • Recipient e-mail addresses
   • Message severity that triggers e-mail messages

8 When InstallShield finishes, select one of these options:
Installing and deploying RepConnector

- Install RepConnector Manager, which takes you to the InstallShield page that installs Eclipse (if it is not already installed on your machine) and the RepConnector administration tool. Click Next and proceed to the next section, “Installing RepConnector Manager”.

  **Note** You can install RepConnector Manager later, or on a different machine.

- Do not install RepConnector Manager, which takes you to the last page of InstallShield and completes installation. Click Finish.

### Installing RepConnector Manager

If you chose to install RepConnector Manager in “Installing RepConnector components” on page 7, follow the steps in this section.

**Note** If you are running on AIX, before you install RepConnector Manager, verify that you have the correct operating system patches. For AIX 5.2, use APAR IY41944.

You can retrieve these patches from the IBM support web page at http://www.ibm.com.

From the RepConnector Manager Options window, select one of:

- Install Eclipse and RepConnector Manager – select this option if you do not have an existing Eclipse installation or an existing Unwired Orchestrator installation. See “Installing RepConnector Manager and Eclipse,” below.

- Install RepConnector Manager on the Existing Eclipse – select this option if you have an existing Eclipse installation and want to install RepConnector Manager into the Eclipse installation directory. See “Installing RepConnector Manager to an existing Eclipse directory.”.

- Install RepConnector Manager on the Existing Sybase Unwired Orchestrator – select this option if you want to install RepConnector Manager in an existing Integrator Orchestrator installation directory. See “Installing RepConnector Manager with an existing Unwired Orchestrator” on page 11.
v **Installing RepConnector Manager and Eclipse**

If you choose to install RepConnector Manager on a machine that does not have an existing Eclipse installation:

1. Enter the directory in which you want to install RepConnector Manager and Eclipse, or accept the default, which is `<AppServer>/repra\eclipse`. Then click Next.
2. On the preview page, click OK.
   
   InstallShield installs RepConnector Manager and the Eclipse framework into the directory you indicated.
3. When the installation is finished, click Finish.
4. Follow the verification steps in “Verifying the installation” on page 18.

v **Installing RepConnector Manager to an existing Eclipse directory**

If you choose to install RepConnector Manager to an existing Eclipse directory structure:

1. Enter the directory for your Eclipse installation.
   
   Click Next.
2. If there is an existing RepConnector Manager installed, InstallShield prompts:

   **Do you want to override the existing RepConnector Manager installation?**

   Click Yes to continue.

   **Note** If you click No, InstallShield does not install RepConnector Manager.

3. InstallShield installs RepConnector Manager. Follow the verification steps in “Verifying the installation” on page 18.

v **Installing RepConnector Manager with an existing Unwired Orchestrator**

If you chose to install RepConnector Manager on a machine with an existing Unwired Orchestrator installation:

1. Enter the directory for your Unwired Orchestrator installation.
2. Click Next to install RepConnector Manager in the Unwired Orchestrator directory, or click Browse to change the directory.
Installing and deploying RepConnector

InstallShield installs RepConnector Manager into the Unwired Orchestrator directory. Now, you can configure and run RepConnector and Unwired Orchestrator from the same Eclipse framework.

3 When the installation is complete, click Finish.

4 The next time you start Unwired Orchestrator (using IntegrationOrchestrator40.bat), a notification window appears:

   Pending Configuration Changes

   Check the changes you wish to process now. Remove changes that should never be processed.

Accept the configuration change you just made (it is listed with the current date and time).

5 You see:

   You will need to restart the workbench for the changes to take effect. Would you like to restart now?

Click Yes to restart Eclipse.
CHAPTER 3

Post-Installation Tasks

This chapter describes the post-installation steps required for both Windows and UNIX.

<table>
<thead>
<tr>
<th>Topics</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Post-installation tasks for Windows</td>
<td>13</td>
</tr>
<tr>
<td>Post-installation tasks for UNIX</td>
<td>16</td>
</tr>
</tbody>
</table>

Post-installation tasks for Windows

RepConnector requires specific environment variable settings to run with your application server and target messaging systems. These environment variables are set in the `repra_env.bat` file. The location for `repra_env.bat` is:

- For EAServer, `%JAGUAR%\repra\bin`, where `%JAGUAR%` is the location of the EAServer installation.
- For WebLogic, `%BEA_HOME%\repra\bin`, where `%BEA_HOME%` is the location of the WebLogic Server installation.

Most environment variables are already set correctly for your environment in `repra_env.bat`. However, you must verify that the environment variable for your messaging system is properly set, and that `repra_env.bat` is called by the batch file that starts your application server.

Note If you modify `repra_env.bat`, you must restart your application server for the new values to take effect.

Verifying that `user_setenv.bat` calls `repra_env.bat` (EAServer)

1. Go to `EAServer\bin`.
2. Right-click `user_setenv.bat` and select Edit.
3. Verify that `user_setenv.bat` contains this line:
Post-installation tasks for Windows

if exist "%JAGUAR%\repra\bin\repra_env.bat" CALL
"%JAGUAR%\repra\bin\repra_env.bat"

Modifying the server-starting batch file to call repra_env.bat (WebLogic)

See your BEA documentation for details about the WebLogic installation.

1. Locate the batch file that starts the server. Typically, the file is in the domain directory and is called startWebLogic.cmd.
   For example, the file could be: C:\BEA\user_projects\domains\mydomain\startWebLogic.cmd

2. Modify the file to call repra_env.bat. Add the new line just above the line that starts the server. For example:
   - Before your edits:
     %JAVA_HOME%\bin\java %JAVA_VM% %MEM_ARGS% %JAVA_OPTIONS% -Dweblogic.Name=%SERVER_NAME% -Dweblogic.ProductionModeEnabled=%PRODUCTION_MODE% -Djava.security.policy="%WL_HOME%\server\lib\weblogic.policy" weblogic.Server
   - After your edits (see the lines in bold):
     if exist C:\BEA\repra\bin\repra_env.bat CALL C:\BEA\repra\bin\repra_env.bat
     %JAVA_HOME%\bin\java %JAVA_VM% %MEM_ARGS% %JAVA_OPTIONS% -Dweblogic.Name=%SERVER_NAME% -Dweblogic.ProductionModeEnabled=%PRODUCTION_MODE% -Djava.security.policy="%WL_HOME%\server\lib\weblogic.policy" weblogic.Server

Starting EAServer

Start EAServer at the command line or from the Windows Start menu.

- To start from the command line, enter:
  ```
  cd %JAGUAR%\bin
  serverstart.bat -jdk14
  ```
- To start from the Windows Start menu, select Start | Programs | Sybase | EAServer 5.2 | Jaguar Server (jdk1.4).

The server is started when “Accepting connections” displays on the last line.
Restarting WebLogic

1. Use your Web browser to log in to the WebLogic Server Console. For example:
   
   http://localhost:7001/console

2. From the console, log in to your WebLogic server using the user name and password of the admin user.

3. Go to `<your domain name>/Servers/<your server name>`.

4. Right-click the server, and from the drop-down list, select Start/Stop This Server.

5. On the next Web page, choose one of the shutdown options:
   - Graceful Shutdown of This Server
   - Forced Shutdown of This Server

   **Note** See the *WebLogic Administrator's Guide* from BEA for detailed information about shutdown options.

6. Click OK to shut down the server.

7. To start the server, do one of:
   - Select *Start* | *All Programs* | *BEA WebLogic Platform 8.1* | *User Projects* | *mydomain* | *Start Server*.
   
   **Note** You can start the WebLogic server from the Start menu only if you have added the shortcut to the Windows system registry when you created the server with the WebLogic Configuration wizard. See the WebLogic documentation for more information.

   - Double-click the server-starting batch file.

   - From the command line, enter:
     
     cd <the domain directory>
     startWebLogic

8. Verify the server running status from the command line console by checking for the following message:

   Server started in RUNNING mode

9. Execute *WLSSStart.bat* from the RepConnector directory to complete the WebLogic installation process.
Post-installation tasks for UNIX

Post-installation tasks for UNIX

RepConnector requires specific environment variable settings to run with your application server and target messaging systems. These environment variables are set in the `repra_env.sh` file, located as follows:

- For EAServer: `$JAGUAR/repra/bin`
- For WebLogic: `$BEA_HOME/repra/bin`

Most environment variables are already set correctly for your environment in `repra_env.sh`. However, you must verify that the environment variable for your messaging system is set properly. You must also verify that `repra_env.sh` is called by the batch file that starts your application server.

**Note** If you modify `repra_env.sh`, you must restart your application server for the new values to take effect.

**Verifying that `user_setenv.sh` calls `repra_env.sh` (EAServer)**

1. Go to `EAServer/bin`.
2. Edit `user_setenv.sh` using any command line editor.
3. Verify that `user_setenv.sh` contains this line:

   ```bash
   if [ -f $JAGUAR/repra/bin/repra_env.sh ]
   then
   . $JAGUAR/repra/bin/repra_env.sh
   fi
   ```

**Modifying the server-starting batch file to call `repra_env.sh` (WebLogic)**

See your BEA documentation for the details about the WebLogic installation.

1. Locate the script file that starts the server. Typically, the file is in the domain directory and called `startWebLogic.sh`.

   For example, the file could be:

   `/opt/BEA/user_projects/domains/mydomain/startWebLogic.sh`
CHAPTER 3   Post-Installation Tasks

2 To modify the file to call `repra_env.sh`, open the file with any text editor. For example:

```
vi /opt/BEA/user_projects/domains/mydomain/startWebLogic.sh
```

Then add the new line that calls `repra_env.sh` just above the line that starts the server. For example, before your edits the text reads:

```
$JAVA_HOME/bin/java $JAVA_VM $MEM_ARGS \
$JAVA_OPTIONS -Dweblogic.Name=$SERVER_NAME \n-Dweblogic.ProductionModeEnabled=$PRODUCTION_MODE \n-Djava.security.policy="$WL_HOME/server/lib/weblogic.policy" \nweblogic.Server
```

After your edits, the text includes the lines in boldface:

```
if [ -f /opt/BEA/repra/bin/repra_env.sh ]
then
   . /opt/BEA/repra/bin/repra_env.sh
fi
```

```
$JAVA_HOME/bin/java $JAVA_VM $MEM_ARGS \
$JAVA_OPTIONS -Dweblogic.Name=$SERVER_NAME \n-Dweblogic.ProductionModeEnabled=$PRODUCTION_MODE \n-Djava.security.policy="$WL_HOME/server/lib/weblogic.policy" \nweblogic.Server
```

Starting EAServer

1 From the command line, enter:
   ```
   cd $JAGUAR/bin
   serverstart.sh -jdk14
   ```

2 The server is started when “Accepting connections” appears on the last line.

Restarting WebLogic

1 Use your Web browser to log in to the WebLogic server console. For example:
   ```
   http://localhost:7001/console
   ```

2 From the console, log in to your WebLogic server using the user name and password of the admin user.

3 Go to `<your domain name>/Servers/<your server name>`.

4 Right-click the server, and from the drop-down list, select Start/Stop This Server.
Verifying the installation

5 On the next Web page, choose one of the shutdown options:
   • Graceful Shutdown of This Server
   • Forced Shutdown of This Server

   **Note** See the WebLogic Administrator's Guide from BEA for detailed information about shutdown options.

6 Click OK to shut down the server.

7 To start the server, from the command line enter:
   ```
   cd <the domain directory>
   startWebLogic.sh
   ```

8 Verify the server's running status from the command line console by checking for the following message:
   ```
   Server started in RUNNING mode
   ```

9 Execute `WLSSStart.sh` from the RepConnector directory to finish the WebLogic installation process.
   See the WebLogic documentation at http://commerce.bea.com/index.jsp for more information.

Verifying the installation

Follow the appropriate procedure to verify your installation.

v Verifying the RepConnector installation for EAServer

1 Start Jaguar Manager if not already started:
   • On Windows, select Start | Programs | Sybase | EAServer 5.2 | Jaguar Manager, or from the command line, where `%JAGUAR%` is the location of the EAServer installation, enter:
     ```
     %JAGUAR%\bin\jagmgr
     ```
   • On UNIX, from the command line, where `$JAGUAR` is the location of the EAServer installation, navigate to `$JAGUAR/bin` and enter:
     ```
     ./jagmgr
     ```
2 In the Jaguar Manager window, select Tools | Connect | Jaguar Manager to connect to your EAServer.

3 On the Login dialog box, enter:
   • The user name. The default is “jagadmin.”
   • The password. The default is blank.
   • The host name. The default is your machine name.
   • The port number. The default is 9000.

   Click Connect.

4 To verify that RepConnector is deployed to your EAServer installation directory structure:
   a Open the Servers folder.
   b Open the EAServer folder. (“Jaguar” is the default name.)
   c Open the Installed Applications folder and verify that the Sybase RepConnector object is listed.

Verifying the RepConnector runtime installation (WebLogic)

1 Start the WebLogic Server Console, if not already started.

   See the WebLogic documentation at http://commerce.bea.com/index.jsp for more information.

2 Open your Internet Explorer or Netscape browser and connect to http://<hostname>:port_number/console.

   For example, enter:
   
   http://localhost:7001/console

3 Enter your user name and password to connect to the server. For example, enter weblogic for both your user name and password.

4 Go to <your_domain>/Deployments/Applications.

5 Verify that the SybaseRepConnector folder is listed.

Verifying the RepConnector Manager installation

If you installed RepConnector Manager, follow this procedure to verify the installation.

1 Run the RepConnector Manager batch or script file, where
   
   your_app_server is the application server:
Verifying the installation

- On Windows, go to `\your_app_server\repra\eclipse`, and run `RepConnectorManager.bat`.
- On UNIX, go to `/your_app_server/repra/eclipse`, and run `RepConnectorManager.sh`.

Eclipse starts and displays the RepConnector Manager Welcome window.

**Note** If the RepConnector Manager Welcome window does not display, select Help | Welcome.

2. Select the large RepConnector graphic to launch RepConnector Manager.
3. Expand the Sybase RepConnector icon.

Two sample connection profiles display under the Sybase RepConnector icon:

- **SybaseRepConnector**
  - EAServer:8080
  - weblogic:7001

If you do not see the tree structure displayed under the Sybase RepConnector icon, have your Sybase contact call Sybase Technical Support.
CHAPTER 4

Uninstalling RepConnector

You can uninstall both the RepConnector runtime component and RepConnector Manager.

<table>
<thead>
<tr>
<th>Topic</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Uninstalling the RepConnector runtime component</td>
<td>21</td>
</tr>
<tr>
<td>Uninstalling RepConnector Manager</td>
<td>24</td>
</tr>
</tbody>
</table>

Uninstalling the RepConnector runtime component

Before you uninstall the runtime component:

- You must have the RepConnector target application server (either EAServer or WebLogic) running.
- If you made any changes to .bat or .sh files, Sybase recommends that you back up these files before you begin to uninstall the RepConnector runtime component.

EAServer

If you are running EAServer, enter:

- On Windows from the command line:
  ```
  cd %JAGUAR%epra\_uninst
  unst.bat
  ```
- On Windows from the GUI:
  Double-click unst.bat.
- On UNIX from the command line:
  ```
  cd $JAGUAR/repra/_uninst/uninst.sh
  ```

WebLogic

If you are running WebLogic, enter one of these methods to start InstallShield, which gives you access to the uninstallation feature.

- On Windows:
  ```
  cd %BEA_HOME%epra\_uninst
  ```
Uninstalling the RepConnector runtime component

uninst.bat

- On UNIX:
  
  cd $BEA_HOME/repra/_uninst
  uninst.sh

v Uninstalling the RepConnector runtime component

Follow this procedure after you start the uninstall feature of InstallShield.

1 On the InstallShield Welcome window, click Next.
2 On the server information pane, provide the server connection information.
   
   For EAServer:
   - Host name
   - Port number
   - EAServer admin user name
   - Password

   For WebLogic:
   - WebLogic domain name
   - Server name
   - Host name
   - Port number
   - WebLogic server admin user name
   - Password

InstallShield removes the RepConnector runtime component from the application server configuration.

Note InstallShield proceeds only if the connection to the application server is established. Otherwise, it displays the same server information page. If you need assistance identifying the correct server information, see your server administrator.

3 In the uninstallation preview window, click Next to accept the directory path to the RepConnector installation to be removed.
CHAPTER 4  Uninstalling RepConnector

If you made any changes to .bat or .sh files, InstallShield prompts, for example:

C:\My_Installation\EASERVER\repra\bin\setlogin.bat exists on this system and has been modified since installation. Do you want to remove this file?

Click Yes to All.

Note If you did not back up these files before you began to uninstall RepConnector, you might want to click Cancel, back up the files, then return to the uninstaller.

InstallShield uninstalls the directories and files for RepConnector 15.0.1.

4 On the summary page, click Finish.

5 Shut down and restart your application server to apply the changed configuration.

Note To pick up the new environment variables, you must restart EAServer using one of the options described in this procedure. Do not use Shutdown and Start commands in EAServer Manager.

• From the command line:
  a To shut down EAServer, enter:

  %JAGUAR%\bin\jagtool -h <server's hostname> -n <servers port number> -u <admin user> -p <admin password> shutdown

  b To start EAServer, where jdkxx is the version of the JDK that you require for your environment, enter:

    cd %JAGUAR%\bin
    serverstart.bat -jdkxx

• From Sybase Central:
  a To shut down EAServer, in EAServer Manager, right-click the server in the Servers folder.
  b Select Shutdown.
    The server shuts down.
Uninstalling RepConnector Manager

To start the server, select Start \ Programs \ Sybase \ EAServer 5.2 \ EAServer Manager.

**Note** After you successfully uninstall the RepConnector runtime component, the `repra` directory and some residual files (like BAK) remain. You can manually delete the entire `repra` directory and any remaining directories and files that you do not need.

---

Uninstalling RepConnector Manager

To uninstall RepConnector Manager, you must run a batch or script file provided in the Eclipse installation directory called `deleteRCManager.bat` on Windows and `deleteRCManager.sh` on UNIX.

**Running the deleteRCManager batch or script file**

1. Go to your Eclipse installation directory:
   - On Windows, where `My_Installation\My_App_Server` is the path to your application server installation:
     ```
     cd \My_Installation\My_App_Server\repra\eclipse
     ```
   - On UNIX, where `My_Installation/My_App_Server` is the path to your application server installation:
     ```
     cd My_Installation/My_App_Server/repra/eclipse
     ```

2. Run the batch or script file:
   - On Windows, from the command line:
     ```
     deleteRCManager
     ```
   - On Windows, from the GUI:
     Double-click `deleteRCManager.bat`.
   - On UNIX:
deleteRCManager.sh

**Note** Two considerations:

- Uninstalling RepConnector Manager does not remove the Eclipse installation: It removes RepConnector from the Eclipse framework. To remove the Eclipse installation, you must manually delete the `eclipse` directory.

- If you installed Eclipse when you installed RepConnector Manager, Eclipse resides in the `repra` directory. Therefore, if you delete the `repra` directory, Eclipse is also deleted. See the Eclipse documentation at http://eclipse.org.
