New Platform Features

Sybase® Unwired Platform 2.2 SP03 includes new features that support OData application development. Only the Sybase Mobile SDK has been updated for 2.2 SP03, not the Unwired Platform Runtime. You need not upgrade to 2.2 SP03 SDK if you do not use the OData SDK.

Note: OData libraries for Sybase Mobile SDK are updated in the upgrade to version 2.2 SP03; the Unwired Platform Runtime remains unchanged. You do not need to upgrade the Unwired Platform Runtime servers when you update the OData libraries.

Note: See *Supported Hardware and Software* for the list of devices, operating systems, APIs, and tools that Unwired Platform currently supports.

- *REST API Applications*
REST client libraries are available with 2.2 SP03 to provide REST SDK support for OData applications.
- *OData SDK*
REST client libraries are available with 2.2 SP03 to provide REST SDK support for OData applications.

REST API Applications

REST client libraries are available with 2.2 SP03 to provide REST SDK support for OData applications.

New REST SDK Support for OData Applications

New REST client libraries are available with 2.2 SP03. The REST SDK libraries enable consumption of Sybase Unwired Platform REST services with pure HTTPS connectivity. The REST SDK provides simplified APIs for registration, exchange settings between client and server, and end-to-end tracing. The SDK also supports native push notifications.

Note: Only the SDK has been updated for 2.2 SP03; the 2.2 SP03 SDK continues to work with 2.2 SP02 runtime.

Three new classes have been added for iOS and Android for registration, exchange setting, end-to-end tracing, and native push notifications:

- iOS – new classes: `SMPClientConnection`, `SMPUserManager`, and `SMPAppSettings`.
- Android – new classes: `ClientConnection`, `UserManager`, and `AppSettings`.

- *Development Task Flow Using REST SDK (HTTP Channel)* (iOS section)

New for REST Development

New information has been added to *Developer Guide: REST API Applications*. A section called *REST SDK Library* has been added to the topic *REST Services Applications* to provide high-level conceptual information.

Documentation Change Reference

Reference for changes made throughout the documentation, sometimes over the span of several releases:

- **Installation Path Variable** – the shorter installation path variable continues to be implemented in 2.2:
 - *SUP_HOME* – replaces `<UnwiredPlatform_InstallDir>\UnwiredPlatform\`
 - *SCC_HOME* – replaces `<UnwiredPlatform_InstallDir>\SCC-XX\`
- **Hybrid App and Hybrid Web Container Name Changes** – Several name changes have been made to Sybase Unwired Platform to reflect the change from a workflow emphasis, to Hybrid Apps and Hybrid Web Container. These name changes can be seen in the Designer user interface, and the product documentation. See the key for new product names introduced in version Sybase Unwired Platform 2.2.
